

**IN THE CLAIMS:**

The text of all pending claims, (including withdrawn claims) is set forth below. Cancelled and not entered claims are indicated with claim number and status only. The claims as listed below show added text with underlining and deleted text with ~~strikethrough~~. The status of each claim is indicated with one of (original), (currently amended), (cancelled), (withdrawn), (new), (previously presented), or (not entered).

None of the claims have been amended or cancelled. The following is a list of all pending claims and their current status for the convenience of the Examiner.

1.     **(Previously Presented)**     An information storage medium for use in a recording and/or reproducing apparatus, the information storage medium storing multi-angle motion picture data corresponding to a motion picture, comprising:  
clip audio-video (AV) streams corresponding to motion picture data for different angles;  
clip information corresponding to the clip AV streams wherein each unit of the clip information comprises an entry point map comprising information on entry points of a corresponding one of the clip AV streams for random access by the apparatus, and information on whether each of the entry points is an angle change point through which the motion picture is reproduced by the apparatus from one angle to another angle: and  
playlist information which comprises at least one playitem that corresponds to the clip AV streams,  
wherein the clip information is provided in a separate area from that of the motion picture data.

2.     **(Previously Presented)**     The medium according to claim 1, wherein the information on whether each of the entry points is an angle change point comprises location information of the entry points among the AV stream.

3.     **(Previously Presented)**     The medium according to claim 1, wherein the clip AV streams corresponding to motion picture data for different angles are interleaved with respect to each other.

4. **(Previously Presented)** The medium according to claim 3, wherein the angle change points correspond to boundaries of interleaved units of the interleaved motion picture data.

5. **(Cancelled)**

6. **(Previously Presented)** The medium according to claim 3, further comprising playlist information which comprises at least one playitem having angle block information, wherein the angle block information comprises information on whether the playitem is for the motion picture data for different angles

7. **(Previously Presented)** The medium according to claim 6, wherein the angle block information further comprises information on a number of different angles for the motion picture.

8 - 9. **(Cancelled)**

10. **(Previously Presented)** An apparatus for reproducing motion picture data for different angles corresponding to a motion picture from an information storage medium, the apparatus comprising:

a reading unit which reads clip AV streams corresponding to the motion picture data for different angles, the clip AV streams being interleaved with respect to each other, from the information storage medium; and

a reproduction unit which reproduces the clip AV streams according to clip information corresponding to the clip AV streams provided in a separate area of the information storage medium from that of the interleaved clip AV streams, and playlist information which comprises at least one playitem that corresponds to the clip AV streams, wherein each unit of clip information comprises an entry point map comprising information on entry points of a corresponding one of the clip AV streams for random access, and information on whether each of the entry points is an angle change point, and wherein the angle change point is a point through which the motion picture is reproduced from one angle to another angle.

11. **(Previously Presented)** The apparatus according to claim 10, wherein the information on whether each of the entry points is an angle change point comprises location

information of the entry points among the AV stream.

12 - 16.      **(Cancelled)**
